

One platform, from booked to paid.

TherapyBill AI is the practice management system for pediatric therapy — **and every step of the day feeds the next.** Every upcoming visit gets its eligibility checked overnight. The session drafts the note. The signed note's codes build the claim. And when a payer denies or underpays, the appeal is one ask away. No re-keying, no second system, no second shift.

B Blanche · practice assistant

on every page

Who's on the schedule tomorrow?

Nine visits across two therapists. Reminders went out — and two patients needed eligibility re-checks, so I ran them overnight. All clear.

And the Horizon claims from March?

- 3 paid in full — \$1,240.00 posted
- 1 underpaid by \$86.40 — dispute drafted
- 1 denied — appeal letter ready for your review

Illustrative conversation with demo-practice data.

A Tuesday, handled.

Practice management isn't a module here — it's the spine. Billing rides along automatically, so the day's work produces the claim instead of a second shift of admin.

7:40a

Open the day

Today's calendar, by therapist and room. Overnight eligibility sweep already flagged one plan change.

B BLANCHE RAN IT

8:00a

Check-in

Front-desk view: arrivals at a glance, forms done in the portal ahead of time, card on file for the copay.

8:45a

Session ends

The note drafts itself from your session details — goals pulled from the treatment plan. You review and sign.

B BLANCHE DRAFTED IT

12:10p

Cancellation

The waitlist offers the slot to the next family. Schedule stays full.

4:30p

Check-out

Codes from the signed note build the claim. Denial-risk warnings fire before you queue it.

B BLANCHE CHECKED IT

9:00p

While you sleep

Eligibility sweeps run, claim statuses sync with payers, tomorrow's reminders go out. Nobody stays late.

B BLANCHE'S NIGHT SHIFT

B Every practice gets Blanche.

Blanche is the AI assistant on every page — the one doing the quiet work in the timeline above. Ask her anything in plain English and she answers from **your practice's real data**, then does the legwork.

Ask her anything

"Which claims are stuck?" · "Did Horizon pay us for March?" · "What's our denial rate this quarter?" — answers with numbers, not links to reports.

She does the legwork

Drafts SOAP notes, appeal letters, and underpayment disputes. Runs eligibility checks. Flags denial risks before claims leave. Reports what she recovered.

Works where you do

Built into every page of the app — or connect your practice to Claude Desktop with a secure connector your admin controls: what it sees, and a confirmation step for anything it changes.

AI suggests. You decide.

Every code is a suggestion grounded in your documentation — **the treating provider reviews and approves all coding, always.** No auto-filed claims, no black boxes.

RUN THE DAY

Front desk to back office, one place

- ◆ **Calendar & front desk** — check-in through check-out
- ◆ **Waitlist** that refills cancelled slots
- ◆ **Patient portal** — intake, consents, messages, balances
- ◆ **Multi-location** scheduling and reporting
- ◆ **Online booking page** families can use directly
- ◆ **Automated appointment reminders**, sent daily
- ◆ **Card-on-file payments** and self-pay invoicing
- ◆ **Secure messaging** with families

DOCUMENT

Notes that back up every code

- ◆ **AI-drafted SOAP notes** — you review and sign
- ◆ **Outcome measures** tracked against goals over time
- ◆ **Denial-risk warnings** before the claim goes out
- ◆ **Treatment plans** with a clinician-reviewed, age-banded goal bank
- ◆ **Accuracy checks** flag codes the note doesn't support
- ◆ **2027-ready speech coding** built on treatment categories

GET PAID

The revenue cycle, watched day and night

- ◆ **Real-time eligibility** before the patient sits down
- ◆ **Nightly status sweeps** on every open claim
- ◆ **Underpayment detection** against contracted rates
- ◆ **Electronic claims** via a national clearinghouse
- ◆ **Appeal letters** drafted from the clinical record
- ◆ **Biller cockpit** — one worklist of what needs a human

KNOW YOUR NUMBERS

The whole practice on one screen

- ◆ **Dashboard KPIs** — revenue, denial rate, days to payment
- ◆ **Therapist productivity** and scheduling insights
- ◆ **Custom reports** you can build and export
- ◆ **Daily report** of what happened and what's stuck
- ◆ **Recovery ledger** — appeals won, underpayments caught
- ◆ **Revenue-at-risk view** before it becomes a write-off

And when a payer pushes back —

most practices write off denials because fighting them takes hours nobody has. Here, the fight is the default:

DAY 0

Denial lands

The nightly sweep catches it — no payer portal safari required.

DAY 1

You approve

Review, edit, sign. Nothing leaves the building without a human.

DAY 0

Appeal drafted

One ask to Blanche — she builds it from the clinical note and the payer's own denial reason.

RESOLVED

Ledger updated

Every recovered dollar lands on one honest scoreboard.

Built for HIPAA

- ✓ PHI encrypted at rest, AES-256
- ✓ Multi-factor authentication
- ✓ Tamper-evident audit trail
- ✓ Hosted on AWS under a signed BAA

Switching is the easy part — bring your patients, appointments, and history with you:
